

## User Acceptance Testing (UAT):

Before deployment, we involve end-users to validate that the software meets their requirements.

**Bug tracking, test documentation, and regression testing**

## Quality Assurance (QA):

Our QA engineers rigorously test software to identify defects, ensure functionality, and maintain high standards. We perform manual and automated testing.

## Manual & Automated Testing

(Selenium, Appium, Cypress)

## Performance Testing:

We assess how your applications perform under various conditions (load, stress, scalability) to optimize their responsiveness.

# QA & Testing Services

## Security Testing:

Protect your applications from vulnerabilities. We conduct security assessments, penetration testing, and vulnerability scanning.

## Load and Compatibility Testing
